# An International Workstation Project

Hans-Joachim Koppert, Deutscher Wetterdienst

D-63067 Offenbach, Germany

E-Mail: [Hans-Joachim.Koppert@dwd.de](mailto:Hans-Joachim.Koppert@dwd.de)

# NinJo Outline

## ■ The Project

- ▶ Partners and Collaboration
- ▶ Meteorological Goals

## ■ Architecture

- ▶ NinJo: A Generic Meteorological Workstation System
- ▶ Overview Client/Server

## ■ Status

- ▶ Components
- ▶ Milestones

# NinJo - The Project Partners

NinJo is a Joint project with 5 organisations involved

Maps not drawn to scale ;-)

# NinJo - The Project Collaboration

## ■ Distributed Teams

- ▶ 3 locations in Germany
- ▶ 1 location in Switzerland
- ▶ 1 location in Denmark
- ▶ 2 locations in Canada

## ■ Project Bodies

- ▶ Project office in Offenbach
- ▶ Steering Committee
  - ▶ Project Managers of all Partners
  - ▶ Topics: Planning, Budget, Risk Management
  - ▶ Every 2 months
- ▶ Project User Group
  - ▶ accompanies the project from the users standpoint
  - ▶ appoints members of the evaluation group
  - ▶ reports to the steering committee

# NinJo - The Project

## Collaboration 2

### ■ The Development Team

- ▶ Work packages
  - ▶ are handled completely at one location
    - E.g. geography, point data layer, point data server ..
    - Makes sure that no additional overhead is introduced
- ▶ One exception to the rule
  - ▶ Architecture team consists of members from all locations
    - Decides technical issues
    - meets every 6-8 weeks

### ■ IDEs and case tools

- ▶ Standardized software products
  - ▶ Common configuration management tool
    - common code and document repository in Offenbach
    - product perforce
    - accessible through firewall :-)
  - ▶ IDE, Performance analysis tool, UML-modeling tool
  - ▶ Bug tracking, requests for enhancements, Bugzilla (hosted in Offenbach )

# NinJo - The Project

## Examples of Work Packages

GeoLayers: GMGO

Themes Settings Visualization Configuration

Radar layer Radar Image  
ModelData Nothing selected

Radar layer Radar Image Oct 28, 2003 1:00:00 AM  
ModelData Nothing selected Oct 28, 2003 1:00:00 AM

Radar: MSC

Diagram: Denmark

# NinJo - The Project

## *Meteorological Goals*

- Support the whole forecast process
  - ▶ Interactive display of all meteorological data
  - ▶ Batch production
  - ▶ Product generation
  - ▶ alerting and monitoring, warning operations
  
- Support the workflow of other departments as well (Research, reports, training)
  
- Access to standard infrastructure ( archives )
  
- Replacement of most legacy software

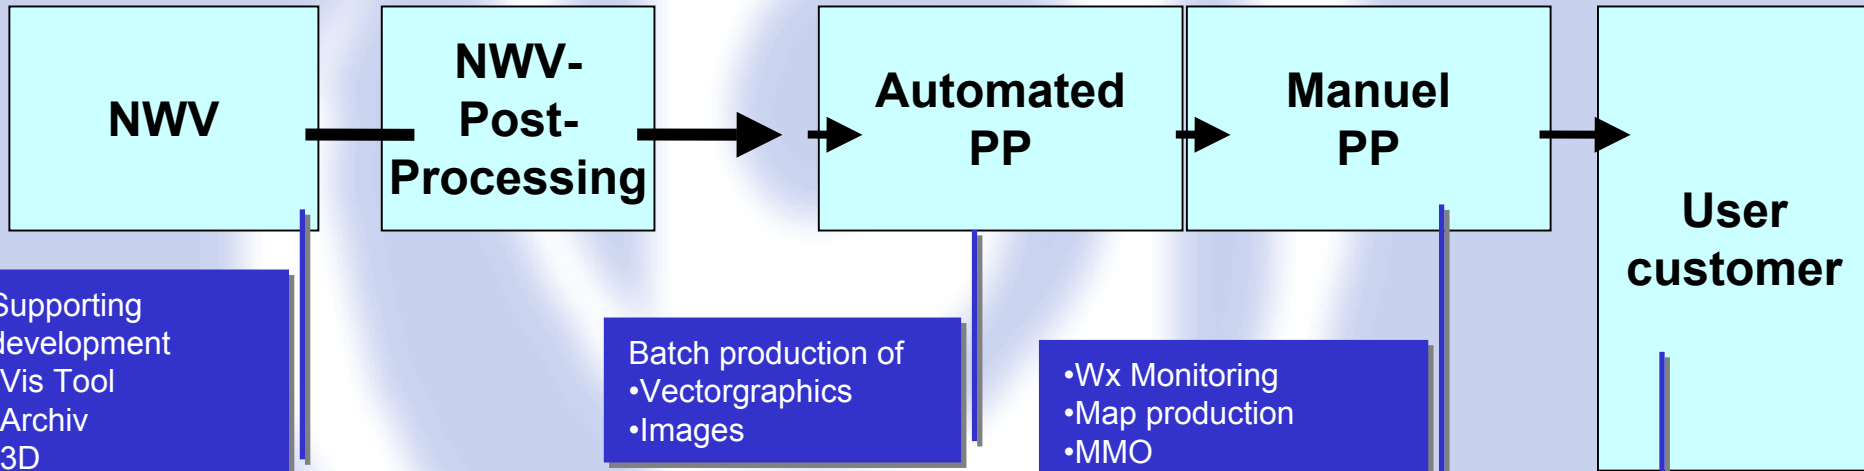

# Where to we place NinJo in the forecast process?

Stat. FCst.  
Mos, Kalman ..  
Wx-Parameters

Auto text  
Grafics  
Animations  
Guidance  
misc...

Reports  
Monitoring  
Warning Oper.  
Nowcasting  
IGS  
MMO

- Supporting development
- Vis Tool
- Archiv
- 3D

- Batch production of
- Vectorgraphics
- Images

- Wx Monitoring
- Map production
- MMO
- Warning Operations
- Science Modules

- Application Server
- E.g. ActionScript Apps

# Meteorological Goals

## ■ Technical functionality

- ▶ Geographical display with pan and zoom
- ▶ 2D display of data in different layers
- ▶ Integrated 3D Visualization
- ▶ Animation, automatic update
- ▶ Context menus
- ▶ Multiple scenes/windows

## ■ Meteorological functionality

- ▶ Product editor
- ▶ On Screen Analysis / data modification
- ▶ Modified Model Output
- ▶ Editor to support warning operations
- ▶ Interactive product generation

# What is NinJo?

- A building kit in order to assemble applications
  - ▶ ranging from satellite viewers to full blown workstations
- A flexible programming model
  - ▶ to allow partners to develop their own application
- A highly configurable Tool (Partners build their own NinJo)
- A generic Meteorological Workstation

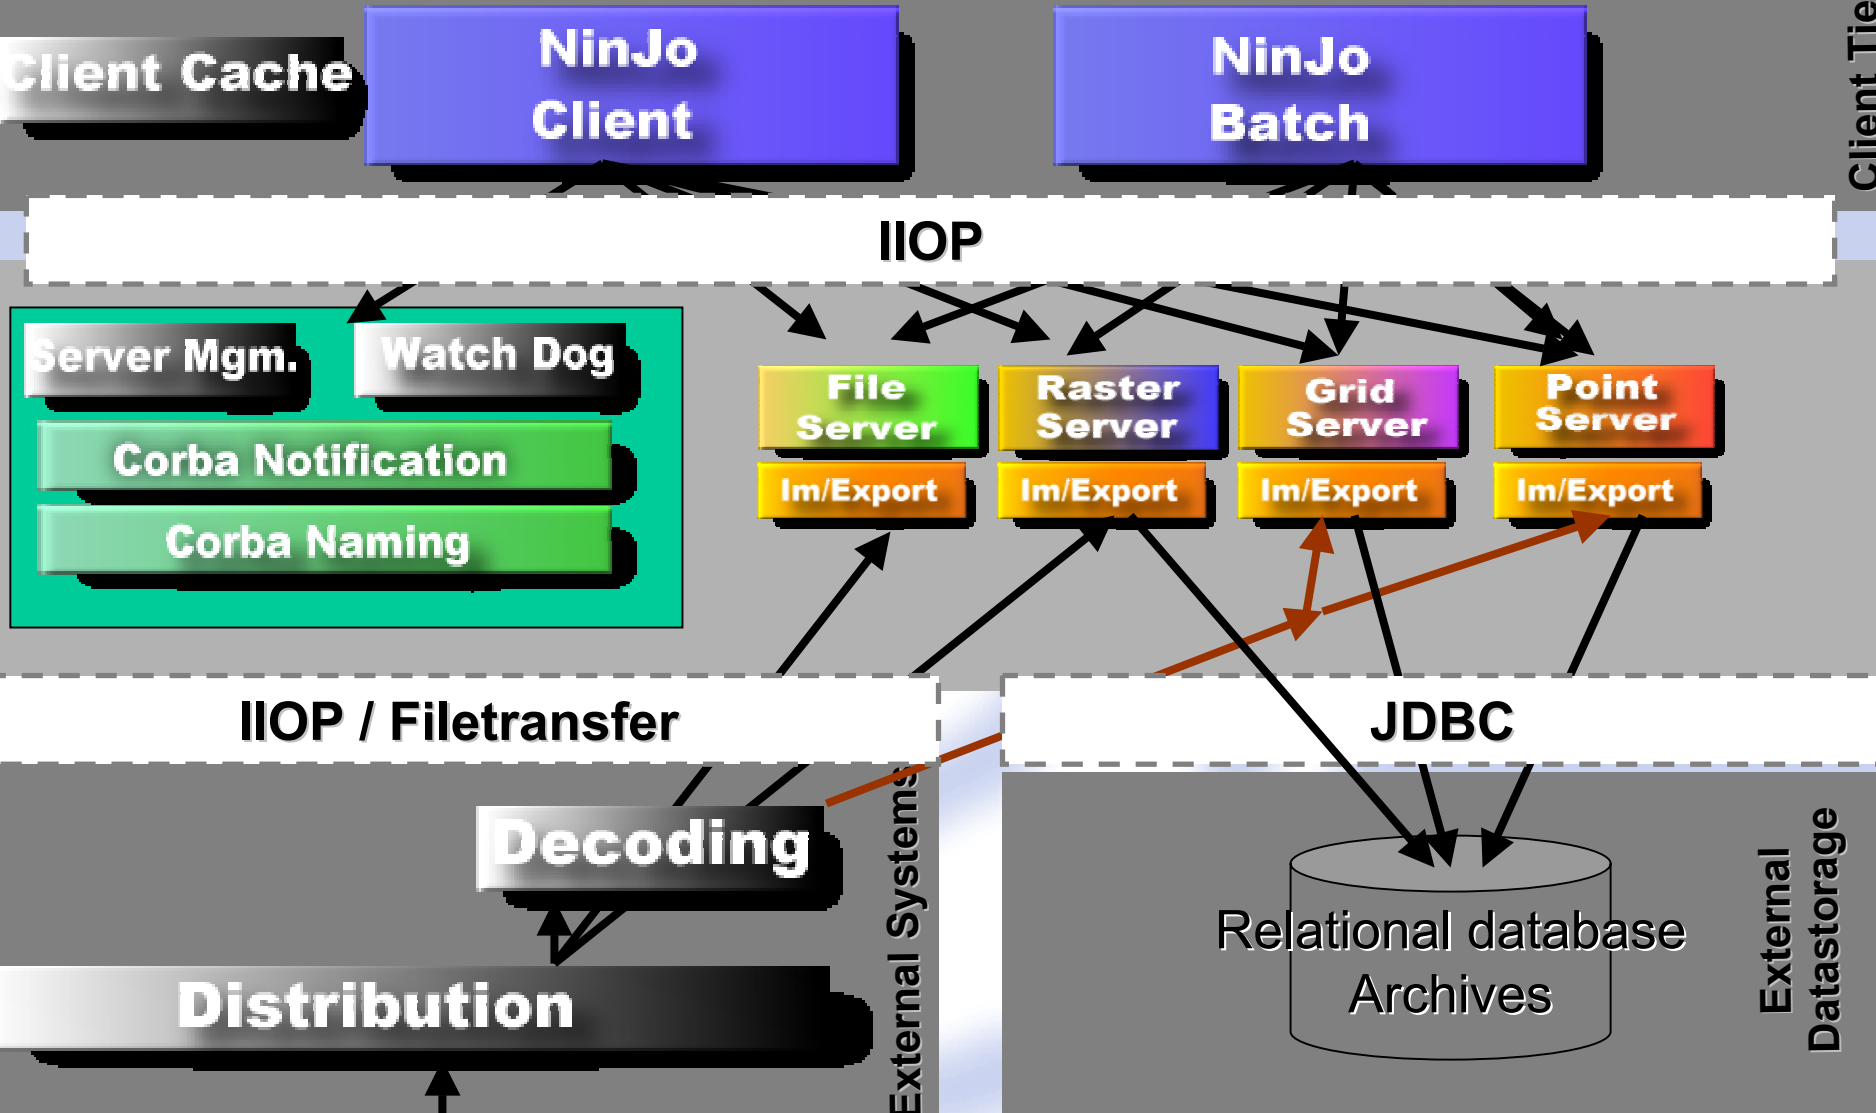

# Architecture

## The NinJo Tiers

Client Tier

# The key components of the NinJo Meteorological Workstation

- Clear, open, and expandable software architecture
- Portability
- The PAC-Framework
- The Client Access Layer
- The Configuration Framework
- Flexible servers

# Portability

## ■ Portability

- ▶ Independence from the operating system
- ▶ Independence from the underlying hardware
- ▶ Java as a computing platform fulfills the requirement
- ▶ NinJo is 99% Pure Java!
  - ▶ No platform specific code ( except HDF5-reader )
  - ▶ No JNI calls (except JOGL, one of the available graphic APIs )

## ■ Benefits of Portability

- ▶ Development can be carried out on any operating system
  - ▶ DMI: Debian Linux
  - ▶ DWD: Windows, SuSe Linux
  - ▶ MeteoSwiss: Windows, Sun Solaris
- ▶ Operational implementation on local infrastructure
  - ▶ Eg. IBM AIX ( DWD, Server Apps )

# Building Applications

## The Frameworks

### ■ Flexible Application and Programming Model

- ▶ Basis of application development in NinJo is a set of frameworks
  - ▶ Configuration framework
  - ▶ **Layer Framework (PAC)**
  - ▶ Server
  - ▶ GOF ( Graphics API )
  - ▶ NIC ( Imaging )
  - ▶ Editing
  - ▶ **Client Access Layer ( generic data access )**
  - ▶ Error and logging
  - ▶ Diagrams
  - ▶ Batch
  - ▶ ....
- ▶ And documentation / training material

# Building Client Applications

## The PAC Framework

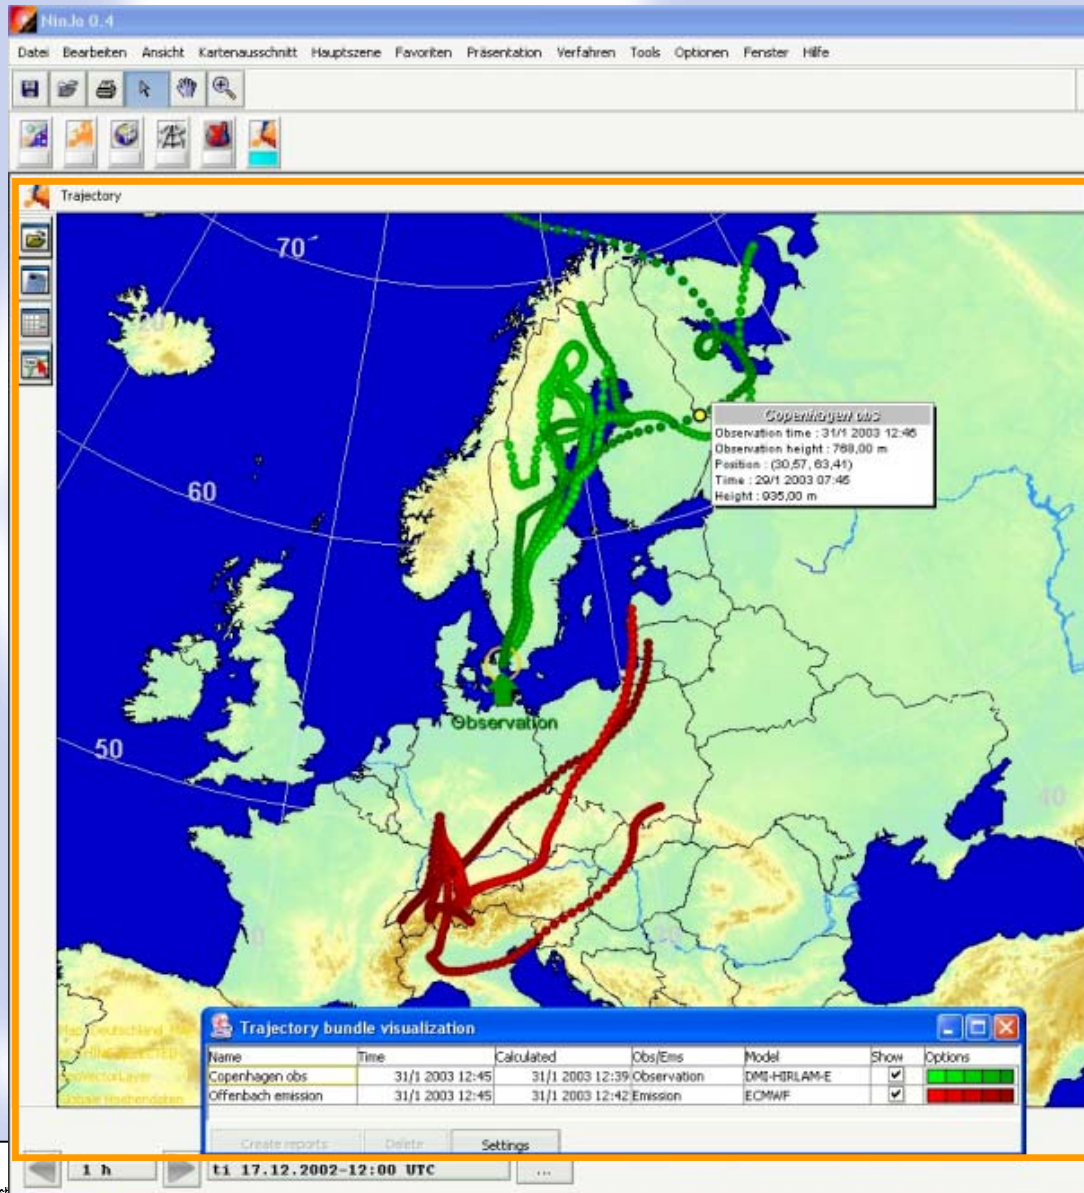

- Allows the construction of a NinJo Client
  - ▶ Enables NinJo to display data in independent, stacked layers
  - ▶ Configuration is loaded from XML-Files or can be done during run-time
- Design pattern used is called PAC
  - ▶ A hierarchy of MVC-triplets
  - ▶ Strict decoupling of layers
  - ▶ Every layer holds it's own data
- All layers are integrated by a Layer Container
  - ▶ integrates GUI-components provided by the layers
  - ▶ responsible for global event handling

# Building Client Applications

## The PAC Framework 2

Layer supplied by project partner

# Building Client Applications

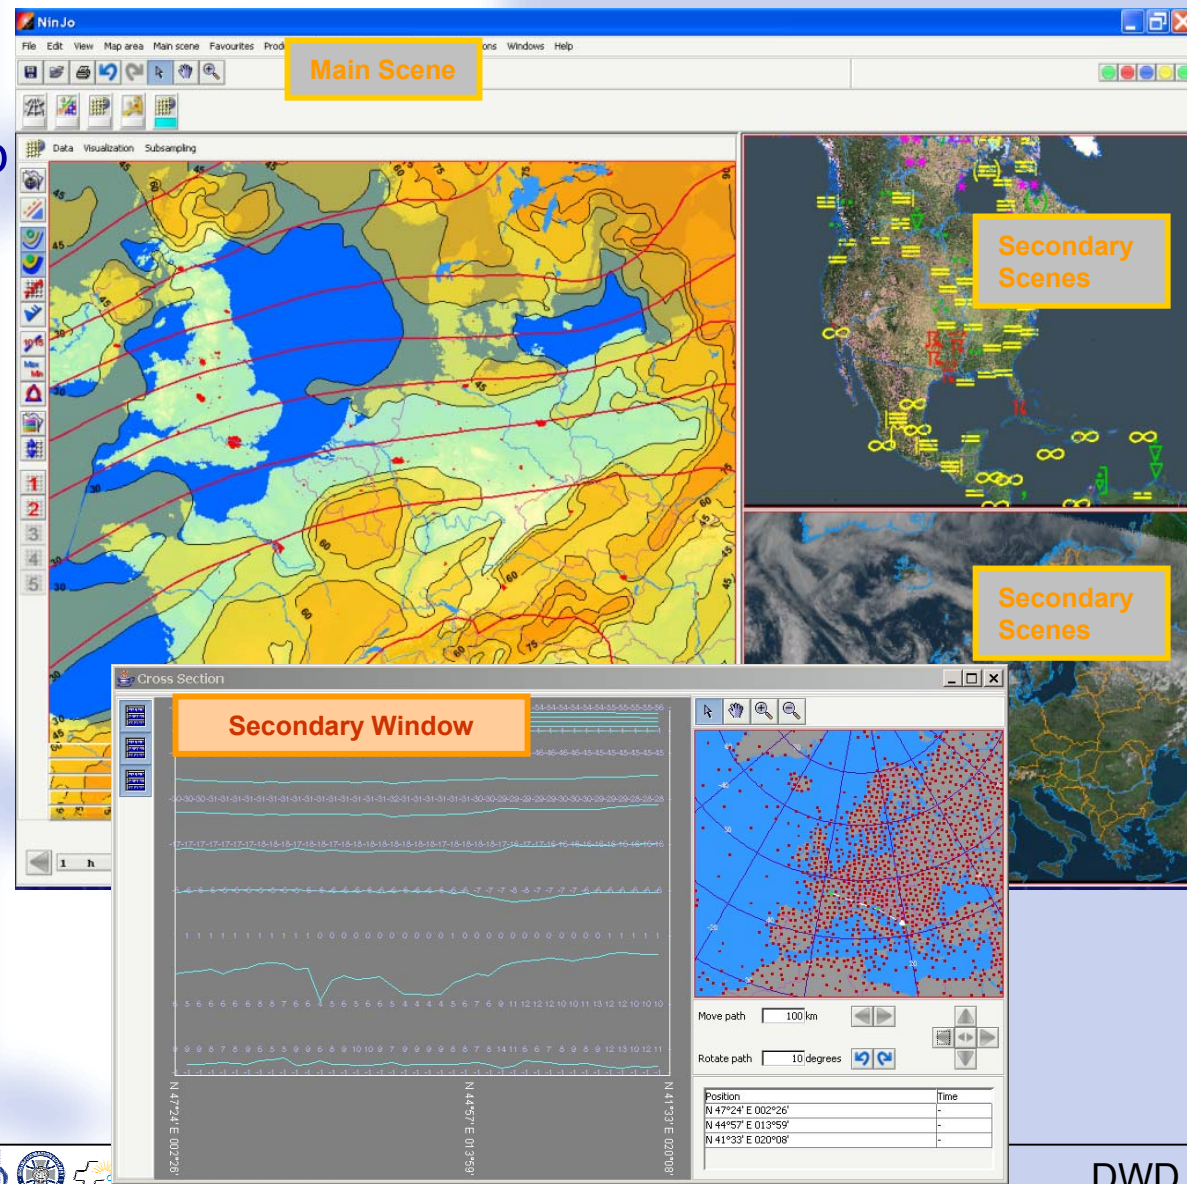

## ■ Main Window

- ▶ One main Window with one main scene and up to 3 secondary scenes (layout configurable)

## ■ Several secondary Windows

- ▶ mostly specialized applications
- ▶ e.g. Meteograms, Cross-Sections, Aerological Diagrams, 3D ...
- ▶ Based on a Diagram Framework

# Accessing Data

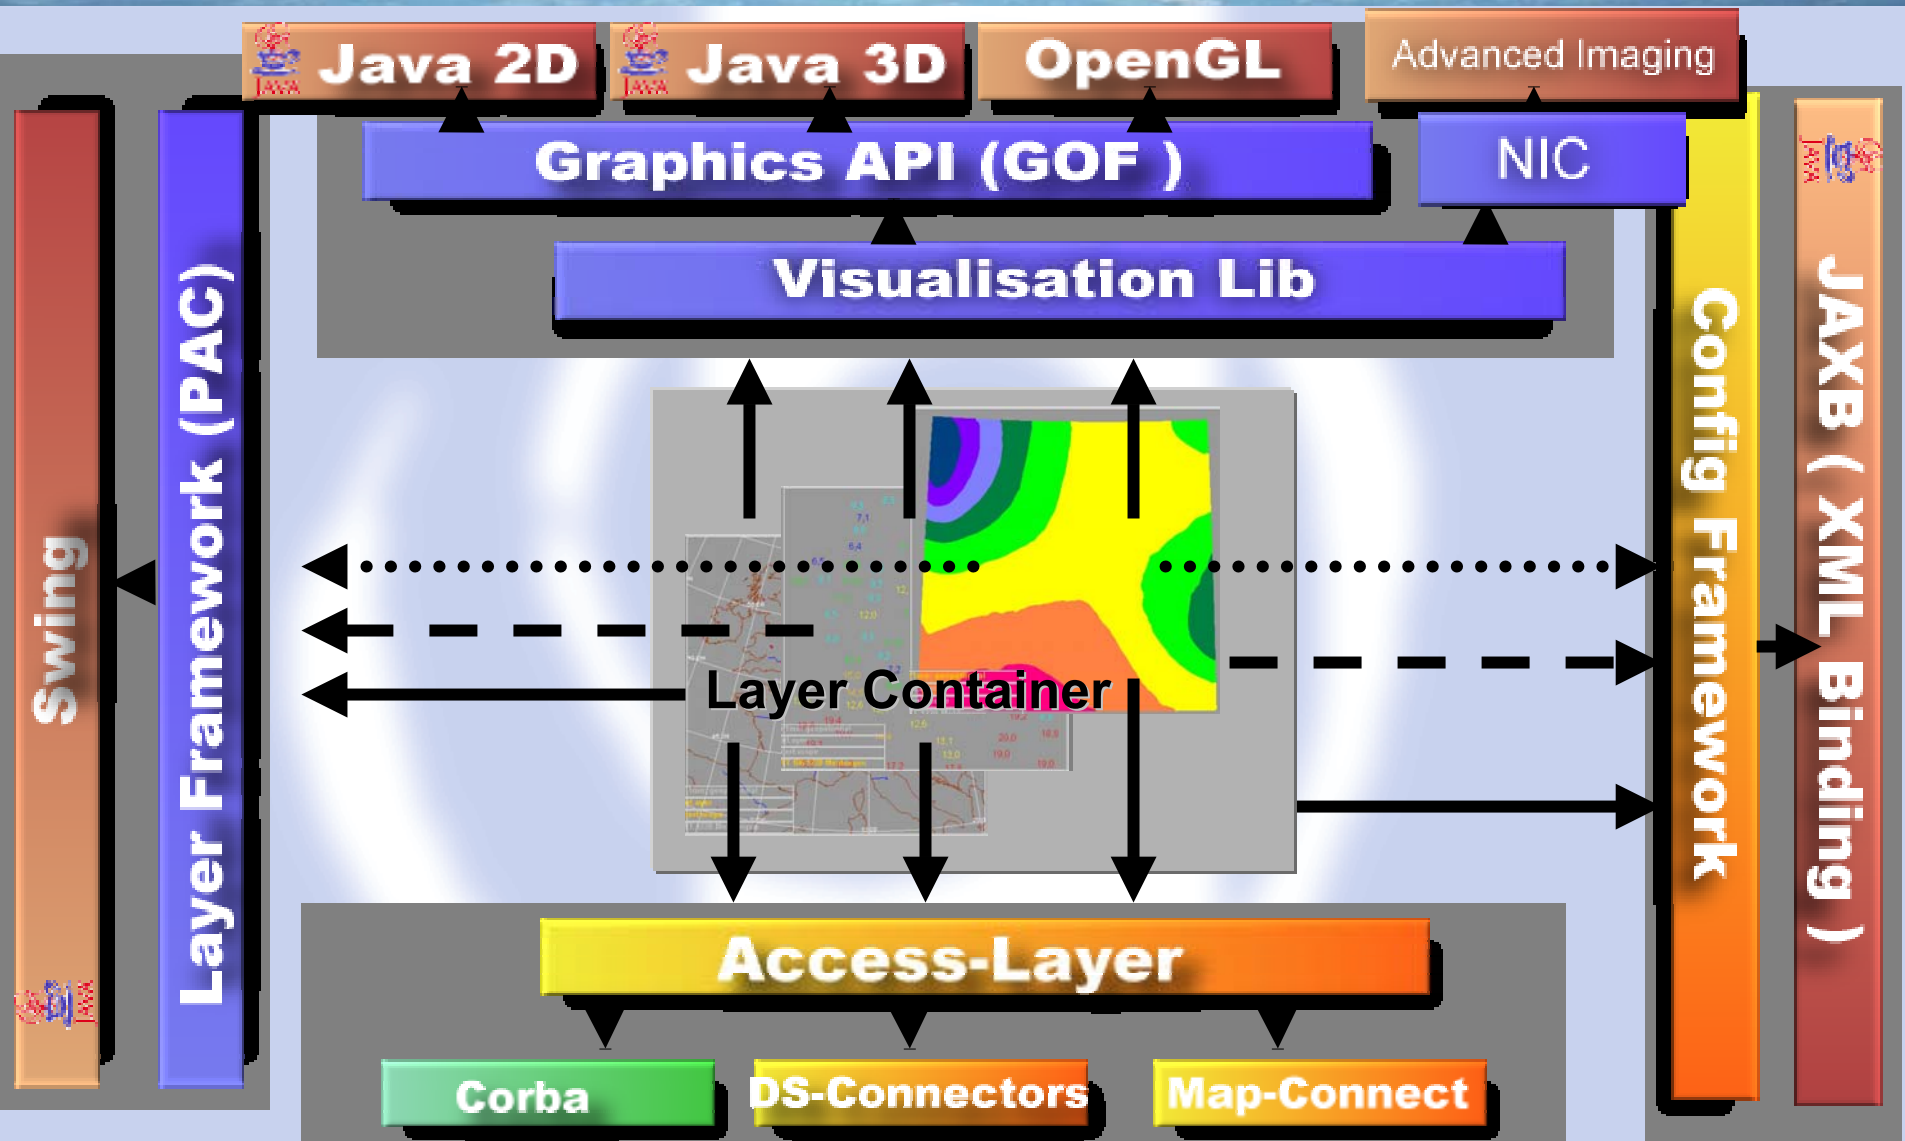

## *The Client Access Layer (CAL)*

- The CAL is the only entry point to access data
- Generic design to handle
  - ▶ arbitrary types of data
  - ▶ different data sources
    - ▶ like local file systems, NinJo data servers, RDBMS'
  - ▶ different middleware infrastructures
    - ▶ CORBA, sockets, RMI
  - ▶ Cares for the transparency when accessing any of these data sources
- All information is stored in a metadata tree
  - ▶ Both data type and data source
  - ▶ Adapter classes can be used to retrieve data from legacy data sources
    - ▶ NinJo partners can write their own adapter classes to fit NinJo into their environment

# The Client Architecture

## GUI and Client-Framework

# Architecture Summary

- The architecture of NinJo is open and portable
- It can be adopted easily to the needs of organizations involved
  - ▶ different hardware and OS-infrastructure
  - ▶ different configuration of clients
  - ▶ different primary data storage mechanisms: files or database
  - ▶ different data supply and backend systems
  - ▶ different communication and middleware infrastructures
- It can be easily extended
  - ▶ new data types
  - ▶ new storage types ( data sources )
- Till now our experiences with Java are mostly good

# Project Status

- Essential client framework components nearly finished
  - ▶ PAC, Config, GUI, Vis, GOF, Diagrams
  - ▶ But, some new functionality and consolidation necessary
- Seven application layers close to final version(Grid, Point Data, GeoVector, GeoRaster, Satellite, Trajectories, Streamlines)
- Minor system framework modules essentially finished
  - ▶ error handling, logging, i18n
- some application layers under development
  - ▶ Graphical/Product Editor, requirement specs nearly done
  - ▶ Radar requirement specs currently rewritten

# Project Status

## Servers

### ■ Servers

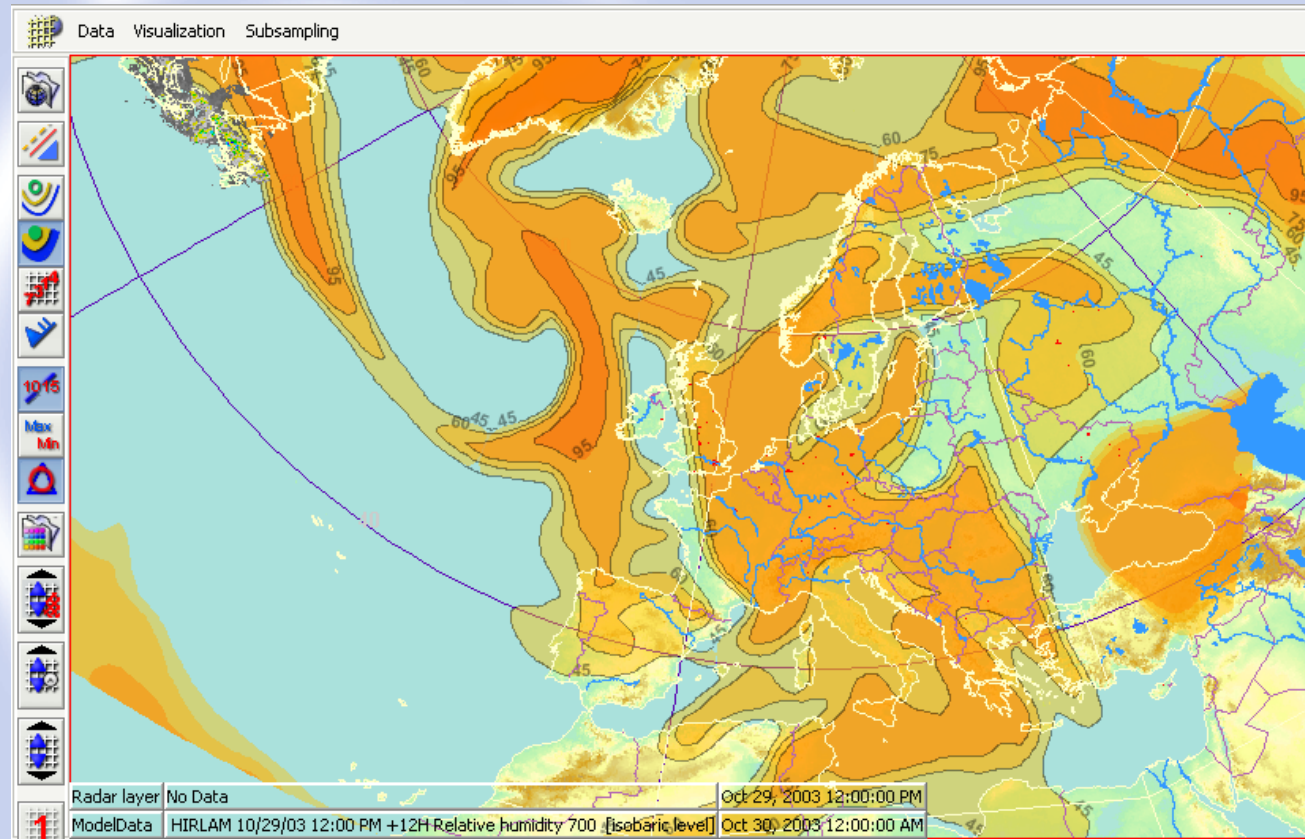

- ▶ Grid server running pre operationally
  - ▶ aLMo ( MeteoSwiss), LM/GME(DWD), HIRLAM(DMI)
  - ▶ MSC models ( GEMGLOBAL, GEMLOCAL and ENCEP model) will follow in January
- ▶ Point data server running pre operationally
  - ▶ import through decoding component GLOBUS ( pure Java too )
  - ▶ currently FM12, FM13 only
  - ▶ later this month: METAR, SPECI, FM35, SCIT alike
- ▶ Product data server running pre operationally
  - ▶ currently 2 implementations: satellite- and radar imagery
  - ▶ more implementations to come ( Config)
- ▶ Modification interface to be developed shortly

# Project Status

## Gridded data

- Handles most partners NWP-models
- Convenience widgets to speed up interaction

Hirlam model, polar stereographic map

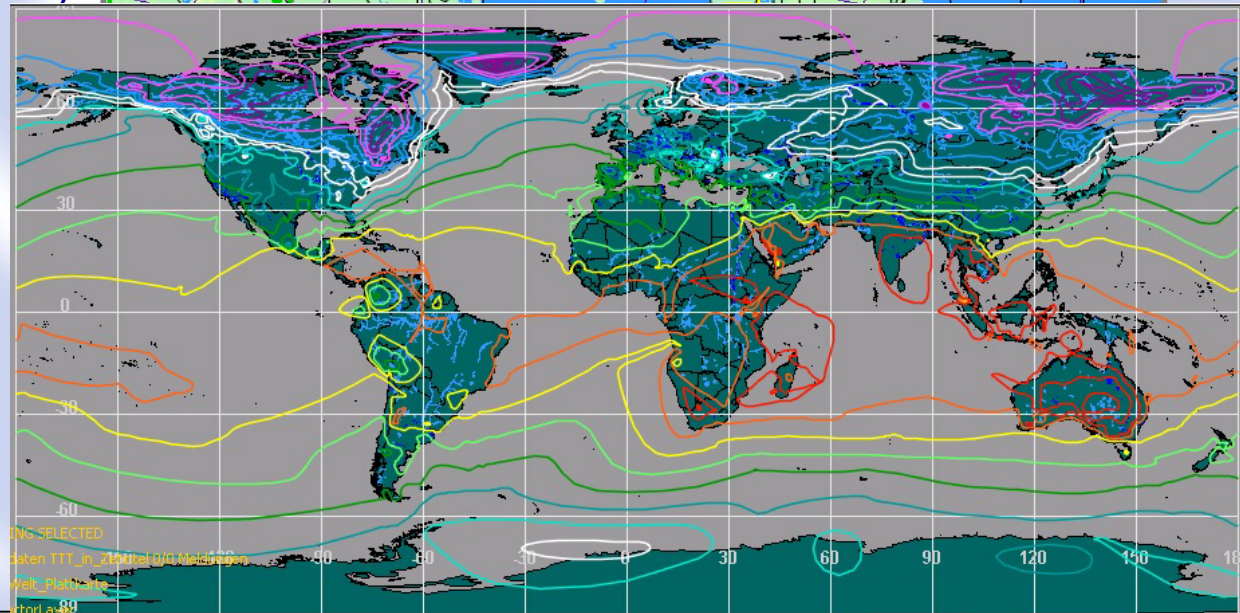

# Project Status

## Point data

- Base point data layer developed
- Extended by several other layers e.g.:
  - ▶ Surface observations
  - ▶ Konrad (SCIT)
  - ▶ Temp (Sep 2004)
  - ▶ Lightning (March 2004)

Wx + analysis of sfc pressure based on triangulation

DWG SELECTED  
Daten TTT\_in\_2MWind/DG/Meteorologie  
Welt\_Plattforme  
Wind.asax

# Project Status

## Satellite Processing

- Import and Server pre operational
- Geostationary satellite based, multiresolution composites available
- MSG integrated
- Polar orbiting satellites and Nowcasting SAF (HDF5-reader already available ) to come march 2004

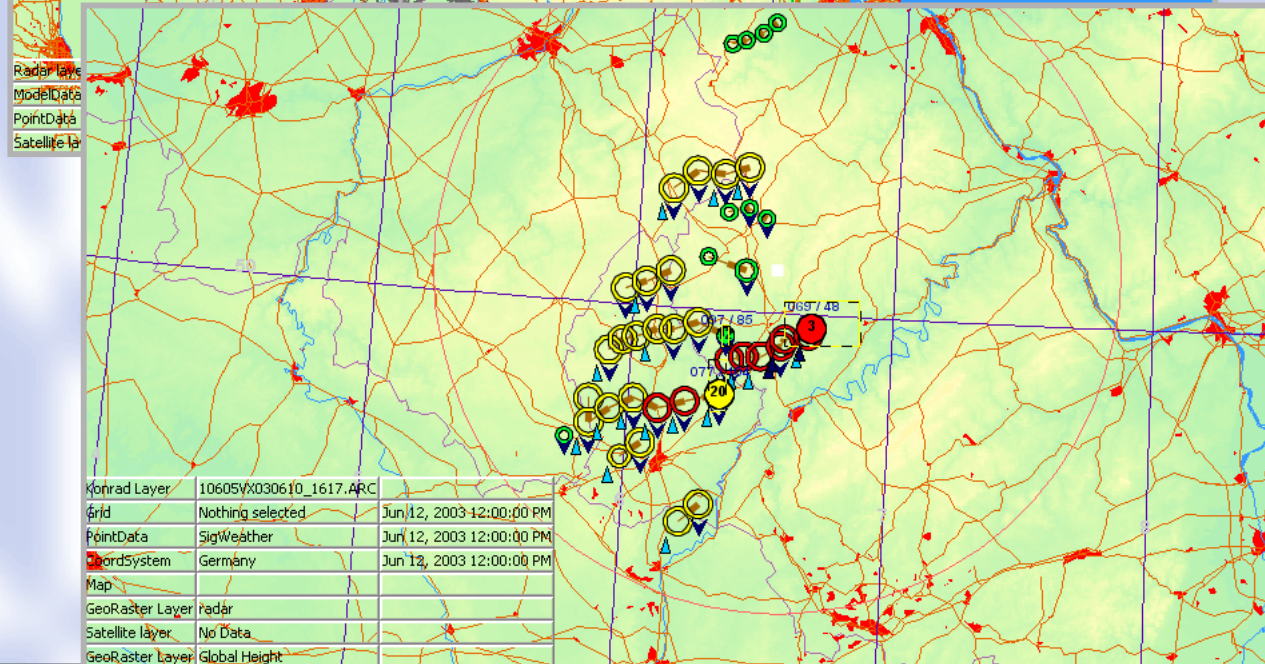

MSG 3 channel composite , Mercator

# Project Status

## Radar

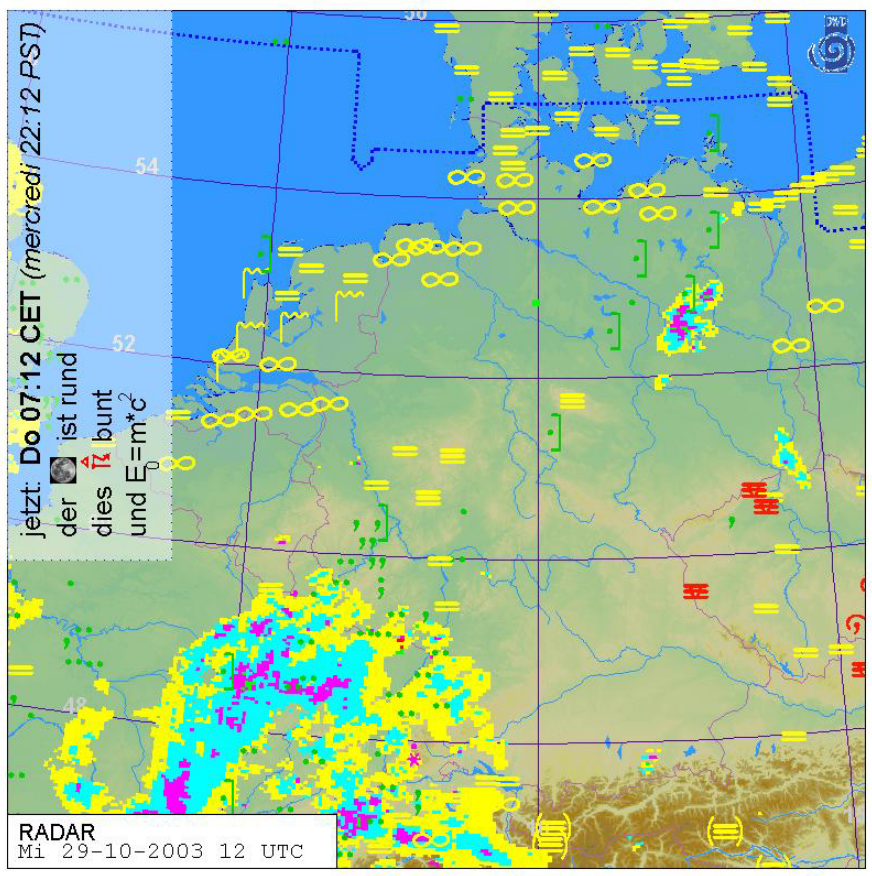

- Imagery currently product based
- DWD implements SCIT-type display
- Radar design on the way
- Radar processing/layer will implement MSC's enhanced CARDS technology

# Project Status Batch

- Image and vector products can be created
  - ▶ jpg, png, tiff...
  - ▶ PDF, SVG, FLASH, PS incl. Animations
- Flexible legend with html-style language
- SMS-based scheduling
- Sophisticated layout and NinJo scheduler to come ( March 2004 )
- Basis for application serving ( NinJo 1.0+)

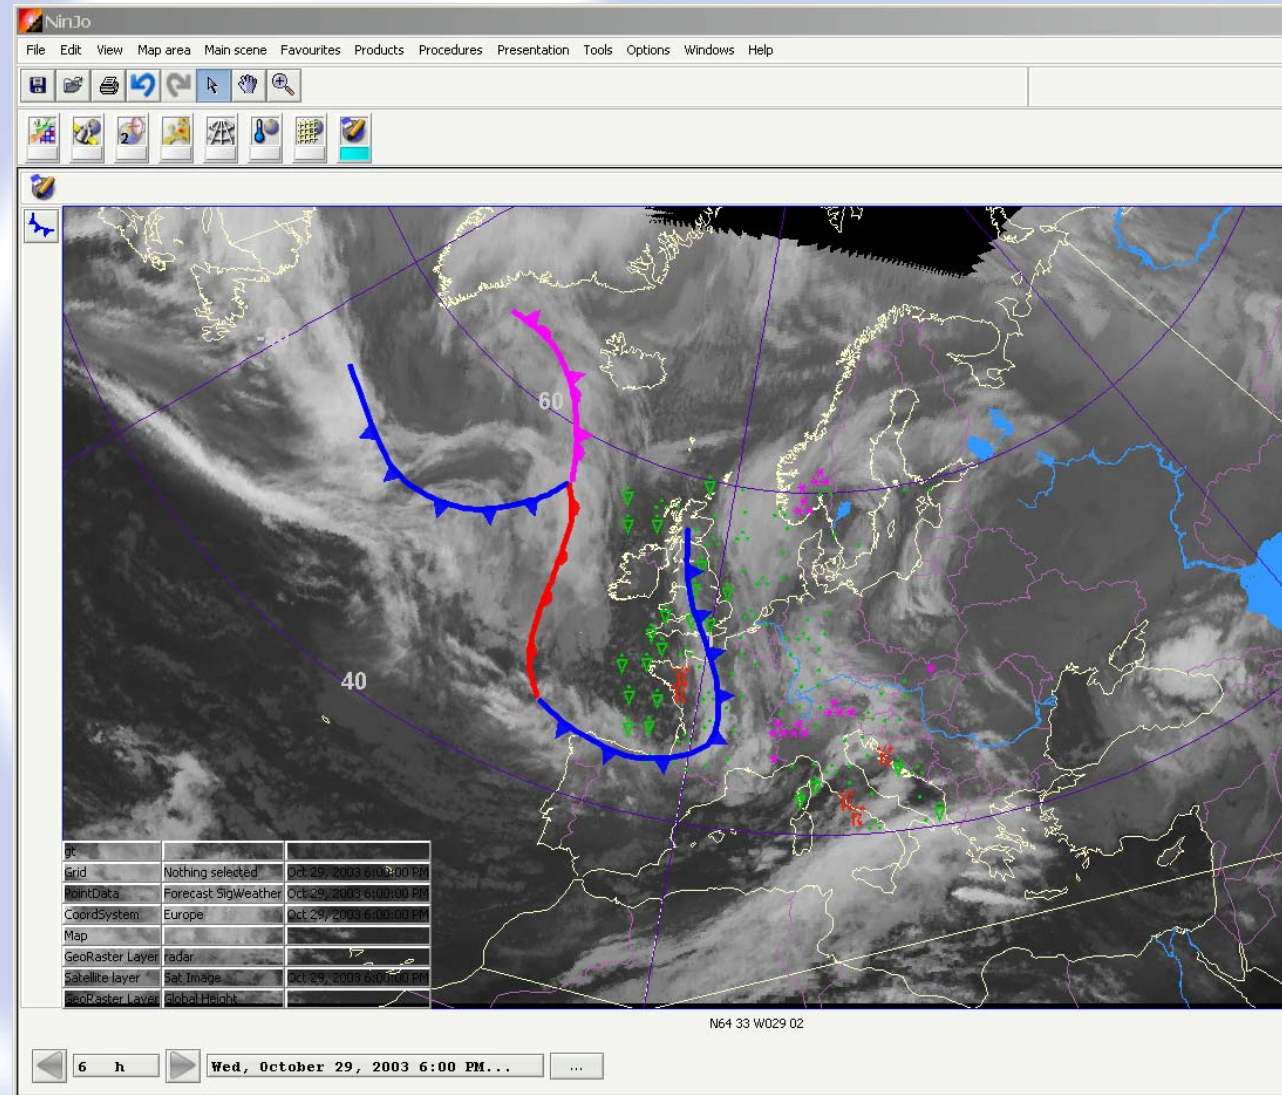

# Project Status

## Grafical Editor

- Basic framework available
- work package handed over to MSC

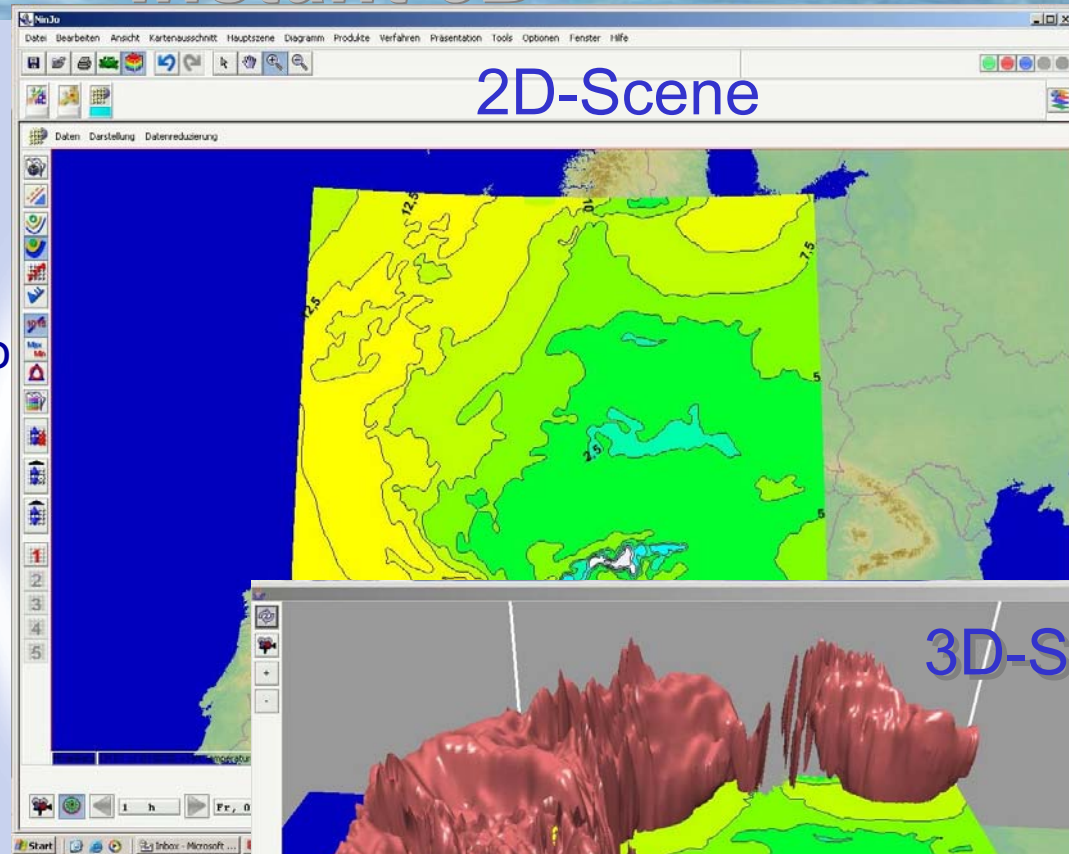

# Project Status

## Instant 3D

- Instant 3D - concept
- 2D scenes mapped to 3D-scenes
  - ▶ intelligent mapping
  - ▶ geo and time link to 2D scene
- First prototype, only limited grid parameters and georaster/geovector implemented
- First release with full NWP-support, point data, satellite- and radar products to come ( march 2003 )

# Project Status

## *Evaluation*

- Important NinJo version are reviewed by the NinJo Evaluation group
- Forecasters and researches can evaluate the software on locally available desktops
- Very valuable input received
- The latest results (NinJo 0.41 ):
  - ▶ Visualization should just be one click away
    - ▶ Currently it's somehow cumbersome - under certain circumstances
  - ▶ Shortcuts and convenience functions
  - ▶ Navigator panel
  - ▶ User manuals less technical

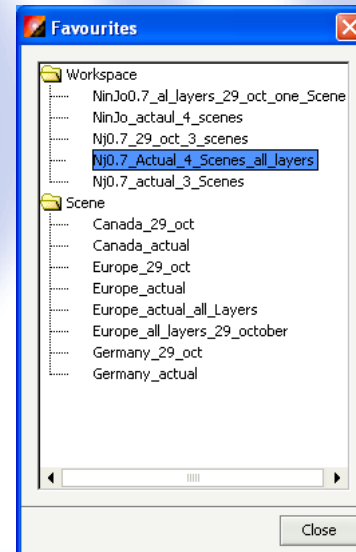

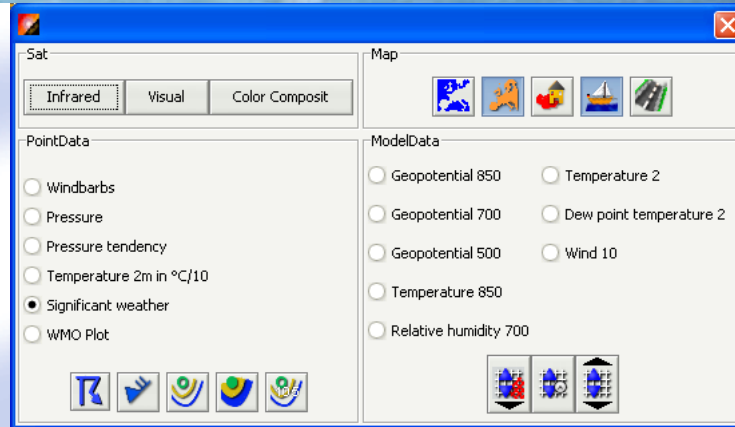

# Project Status

## GUI - enhancement

- Integrates results of NinJo prototype evaluation by forecasters
  - ▶ e.g. Navigator panel

- Quick access to use cases
  - ▶ myGUI
  - ▶ favorites

- Undo / Redo

# The Project Status

## Version Feature List

Version/ Release Date

Features

.....

Feb, 18th, 2003, NinJo 0.5

- Satellite Layer, no Server Functionality

June, 2003, NinJo 0.60

- Consolidated layers and frameworks
- Point data server export
- Favourites and undo
- New features in existing layers
- Trajectory layer

EGOWS

November, 2003, NinJo 0.70

- Evaluation Group input
- Diagrams
- Graphical Editor (framework )
- Batch
- More point data
- Radar
- Streamlines
- More Servers pre operational
- Formulas ( only point data )

Now!

December, 2004, NinJo 1.0

- Interactive chart production
- Data modification
- Monitoring/alerting/warning
- New radar software ( MSC's CARDS)
- Sounding applications
- More layers ( lightning ... )
- .....

# The End

There will be a NinJo demo today  
in the Class room

# The Project

## Version Feature List 1

### ■ Version/ Release Date    ■ Features

---

#### ■ 0.1, Oct. 2001

- Graphic API
  - 3D-Visualisation of isosurfaces
  - 3D-textured DEM data
- 

#### ■ 0.2, Feb. 2002

- Client frame work 1.0
  - Surface observation layer ( FM12 only ) with limited functionality
  - Geovector layer based on VMAP0 and german high res. Data
  - First Version of Access layer
- 

#### ■ 0.3, Sep. 2002

- grid layer
  - Geo vector layer
  - Configuration framework
  - Logging and error handling
  - Start QM
- 

#### ■ 0.41; January 15th

- Raster image framework
  - New FM 12 layer
  - Geo raster data
  - Gridded data server
  - Redesign Access Layer
-

# NinJo Communication
