

# H-SAF 3<sup>rd</sup> Open Workshop

Reading, 3-6 November 2014

## H-SAF introduction to HEPEX

Flavio Gattari

H-SAF Project Management

# H-SAF Objectives

- To generate, disseminate, archive and **guarantee operational provision** of high quality **precipitation, soil moisture** and **snow products** for operational hydrological applications derived from Earth observation satellites in geostationary and polar orbits operated both by EUMETSAT other satellite organizations.
- To perform a continuous and independent **quality monitoring and assessment** of the products for hydrological applications.

## Precipitation Products

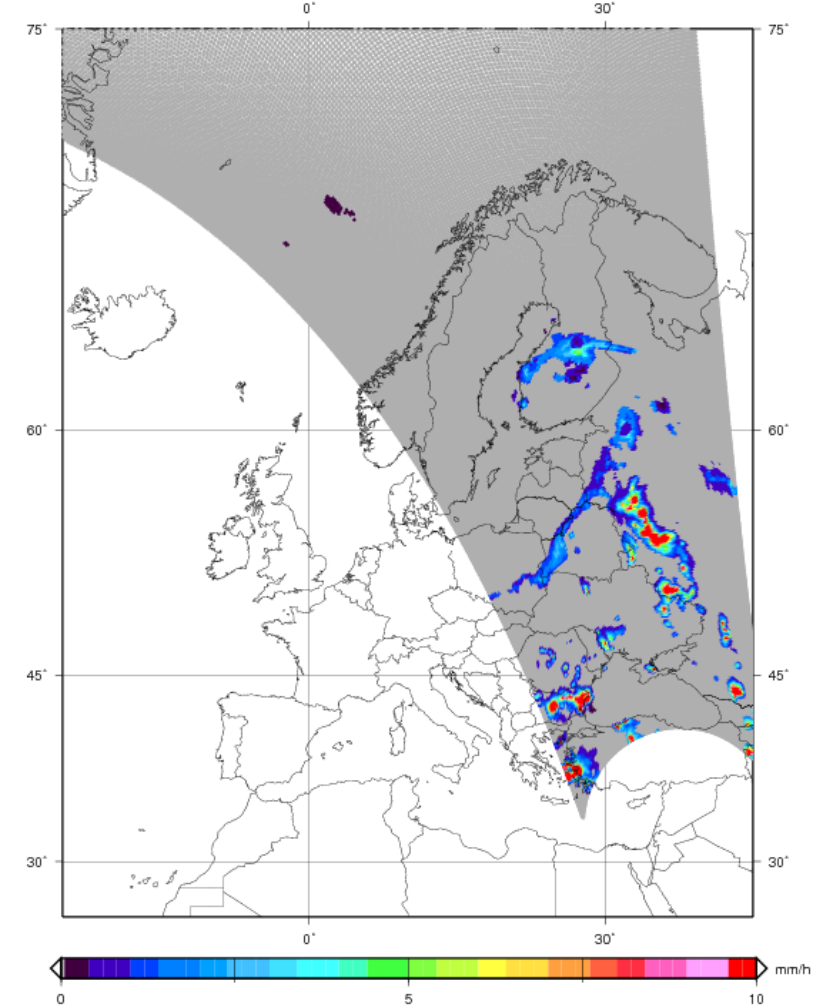

H01 PR-OBS-1	Precipitation rate at ground by MW conical scanners	Operational
H02A PR-OBS-2A	Precipitation rate at ground by MW cross-track scanners	Operational
H03A PR-OBS-3A	Precipitation rate at ground by GEO/IR supported by LEO/MW	Pre-operational
H04A PR-OBS-4A	Precipitation rate at ground by LEO/MW supported by GEO/IR	Pre-operational
H05A PR-OBS-5A	Accumulated precipitation at ground by blended MW and IR	Pre-operational

## PR-OBS1 / H01

### Precipitation from Microwave Conical scan satellite (SSM/I/S)

EUMETSAT H-SAF PR-OBS-1 Instantaneous Rain Rate from Conical MW Scan

Rain Rate retrieved from SSM/I and SSMIS data: rom 20140529 1657 DMSP18 23779

CSM 2014 May 29 20:08:56 —Production\_SATELLITE\_AREA\_CNMC.A—Algorithm\_J.S.A.C\_CN.R.—

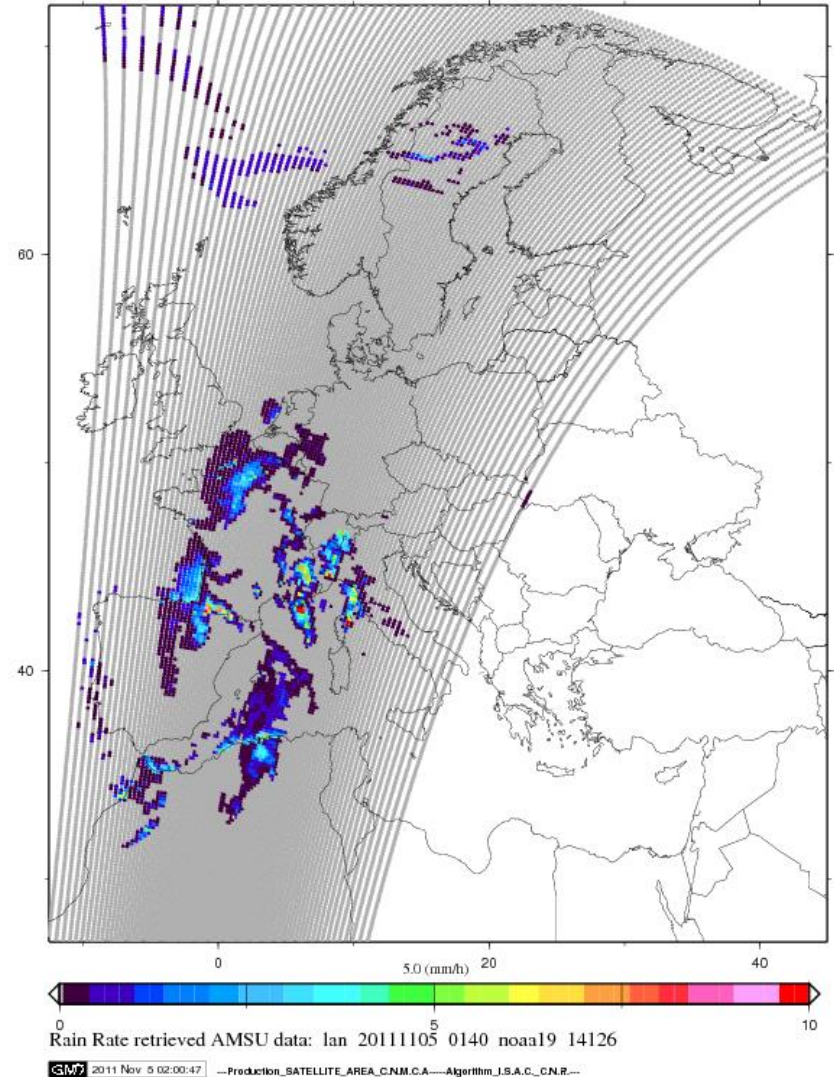

# H-SAF Operational Products: examples

## PR-OBS2 / H02

Precipitation from Microwave  
Cross scan satellite (AMSU/MHS)

EUMETSAT H-SAF PR-OBS-2 Instantaneous Rain Rate from Crosstrack MW Scan

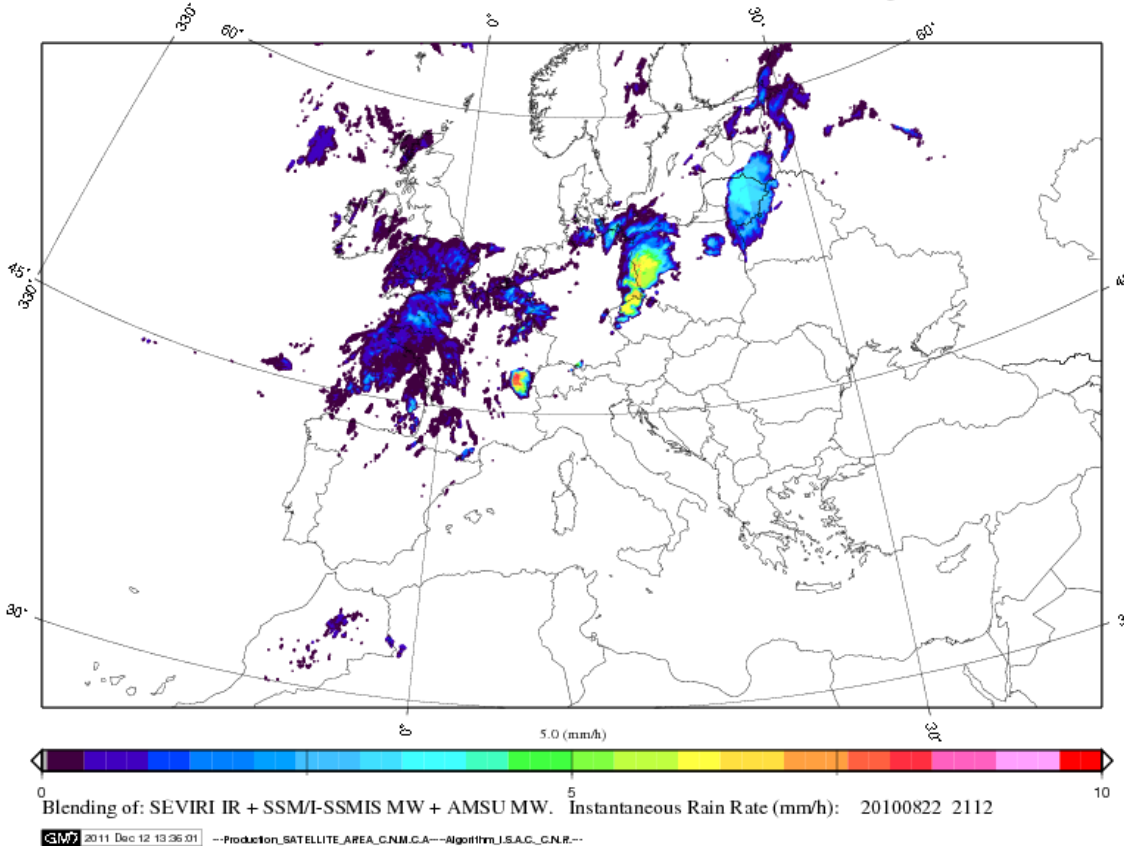

PR-OBS3 / H03

Multi-platform algorithm: **BLENDING**  
Technique

EUMETSAT H-SAF PR-OBS-3 Instantaneous Rain Rate retrieved from IR-MW blending data

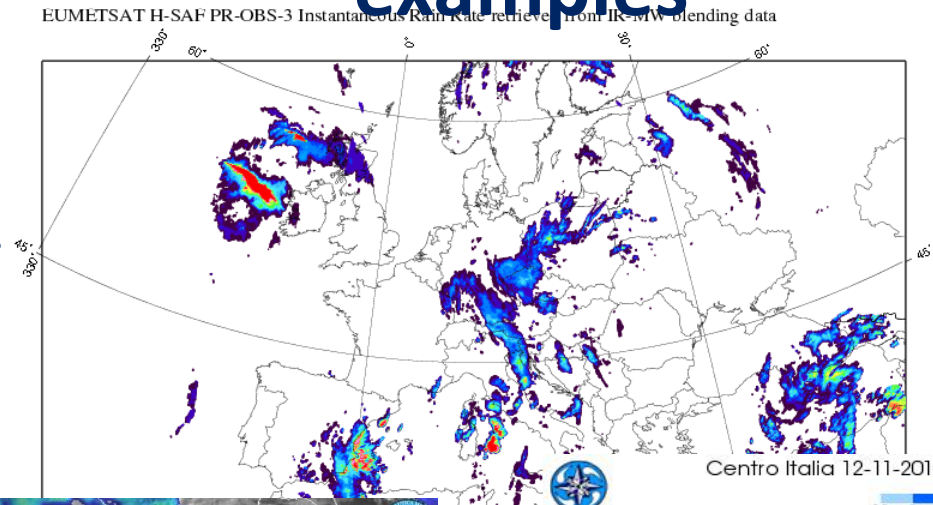

The “Rapid Update” technique allows to compute instantaneous rain intensities at the ground at the geostationary time-space scale (Turk et al. 2000, Torricella et al. 2007).

It is based on a blended MW-IR technique that correlates, by means of the statistical probability matching, brightness temperatures measured by the IR geostationary sensors and PMW-estimated precipitation rates at the ground.

# H-SAF Operational Products: examples

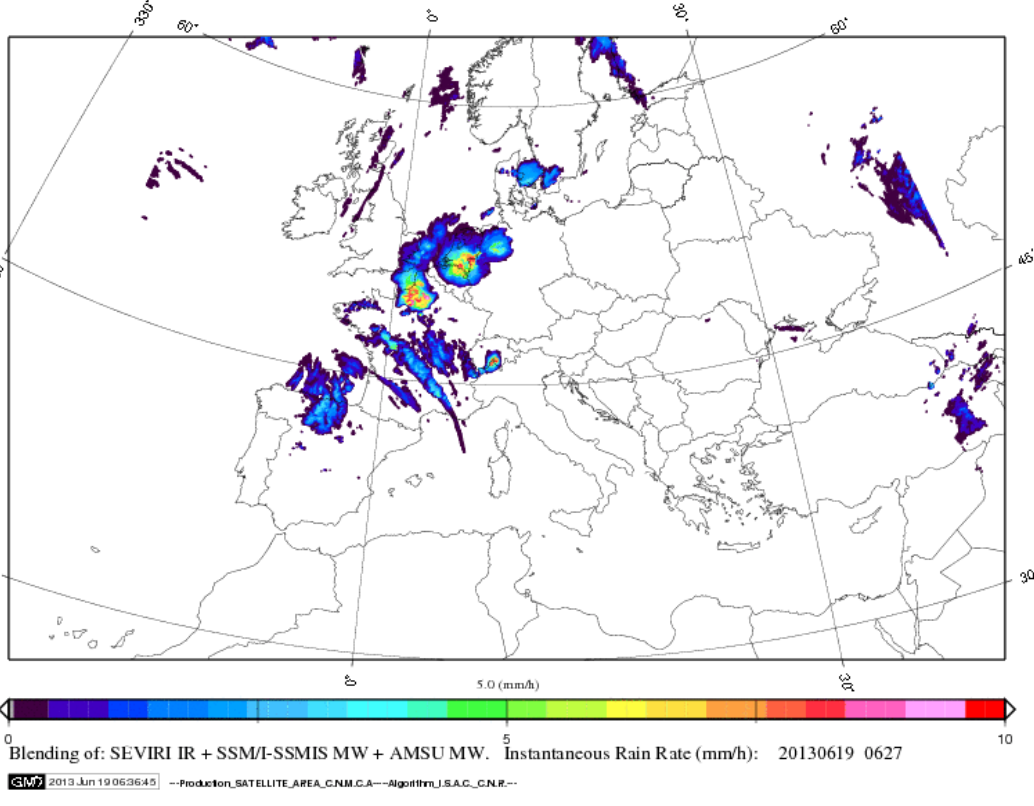

H03 Case study:  
11-12 /11/ 2012  
Grosseto (Italy)

H03 Case study:  
19 June 2013  
Germany

## PR-OBS4 / H04 Multi-platform algorithm: MORPHING

### Technique

EUMETSAT H-SAF PR-OBS-4 Microwave-derived Rain Rate propagated using GEO-IR information

Propagation vector matrices are produced by computing spatial lag correlations over successive images of GEO/IR and then used to propagate the MW-derived precipitation estimates in time and space when updated MW data are unavailable (OFFLINE PRODUCT)

# H-SAF Operational Products: examples

## PR-OBS5 / H05 Accumulated Precipitation

EUMETSAT H-SAF PR-OBS-5 Accumulated Precipitation in the previous 3 hours

EUMETSAT H-SAF PR-OBS-5 Accumulated Precipitation in the previous 6 hours

EUMETSAT H-SAF PR-OBS-5 Accumulated Precipitation in the previous 12 hours

EUMETSAT H-SAF PR-OBS-5 Accumulated Precipitation in the previous 24 hours

# In development Products

## Enlargement to Full Disc

H02B PR-OBS-2B	Precipitation rate at ground by MW cross-track scanners	Algorithms to be assessed by end 2014  Expected Operations in 2016
H03B PR-OBS-3B	Precipitation rate at ground by GEO/IR supported by LEO/MW	
H04B PR-OBS-4B	Precipitation rate at ground by LEO/MW supported by GEO/IR	
H05B PR-OBS-5B	Accumulated precipitation at ground by blended MW and IR	

# In development Products

## New Precipitation Products

H15	Blended SEVIRI Convection area / LEO MW Convective Precipitation	<p>Algorithms assessment expected in 2015</p> <p>Expected Operations in 2016</p>
H17	Precipitation rate at ground by MW conical scanners (GCOM-W1 AMSR2)	
H18	Precipitation rate at ground by MW cross-track scanners (Suomi NPP ATMS)	
H19	Rainfall intensity from GMI (GPM- Microwave Imager)	
H20	Rainfall intensity from GMI (GPM - Microwave Imager) [Neural Network] algorithm]	
H21	High frequency MW delineation of cloud areas with new development of hydrometeors (MHS)	
H22	Snowfall intensity (MHS)	

# In development Products

## MTG-based Products

H40 PR-OBS-3 -FCI	Precipitation rate at ground by GEO/IR supported by LEO/MW and MTG FCI	<p>Algorithms assessment expected in 2016</p> <p>Expected Operations in CDOP3 (next phase)</p>
H41 PR-OBS-4-FCI	Precipitation rate at ground by LEO/MW supported by GEO/IR (with flag for phase) and MTG FCI	
H42 PR-OBS-5-FCI	Accumulated precipitation at ground by blended MW and IR and MTG FCI	
H50 PR-OBS-11	Rainfall intensity from MTG LI	
H43 SN-OBS-0G-FCI	Snow detection (snow mask) by VIS/NIR of MTG FCI	

# In development Products

## Soil Moisture: Large Scale improvement and Time Series

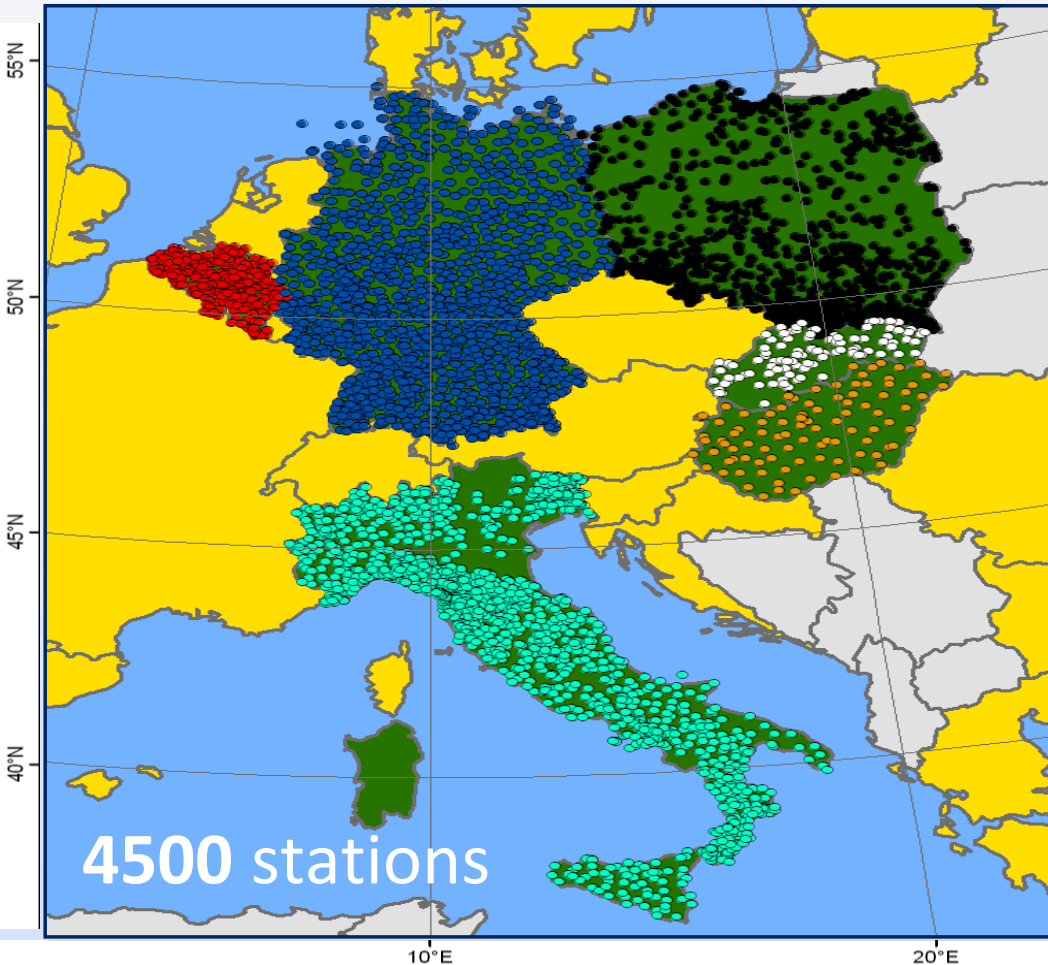

H16 SM-OBS-3	Large-scale surface soil moisture by radar scatterometer (25 km, ASCAT)	Expected operations in 2015
H02 PR-OBS-2	ASCAT Large-scale surface soil moisture (25 Km) - Time Series	Released as Demonstrational
H03 PR-OBS-3	Soil Wetness Index in the roots region by scatterometer assimilation in a NWP model - Time Series	Expected release in 2016

# Quality Monitoring and Hydrovalidation Programmes

- Quality Monitoring Programme provides a continuous assessment of the products quality and performances by evaluating **statistical scores** and case study analysis on the base of **comparison between satellite products and ground data**;
- Hydrovalidation Programme provides the impact with hydrological applications by **interfacing with hydrological models**, performed both through near real time and off-line impact studies

# Quality Monitoring Programme

## The Raingauge Network

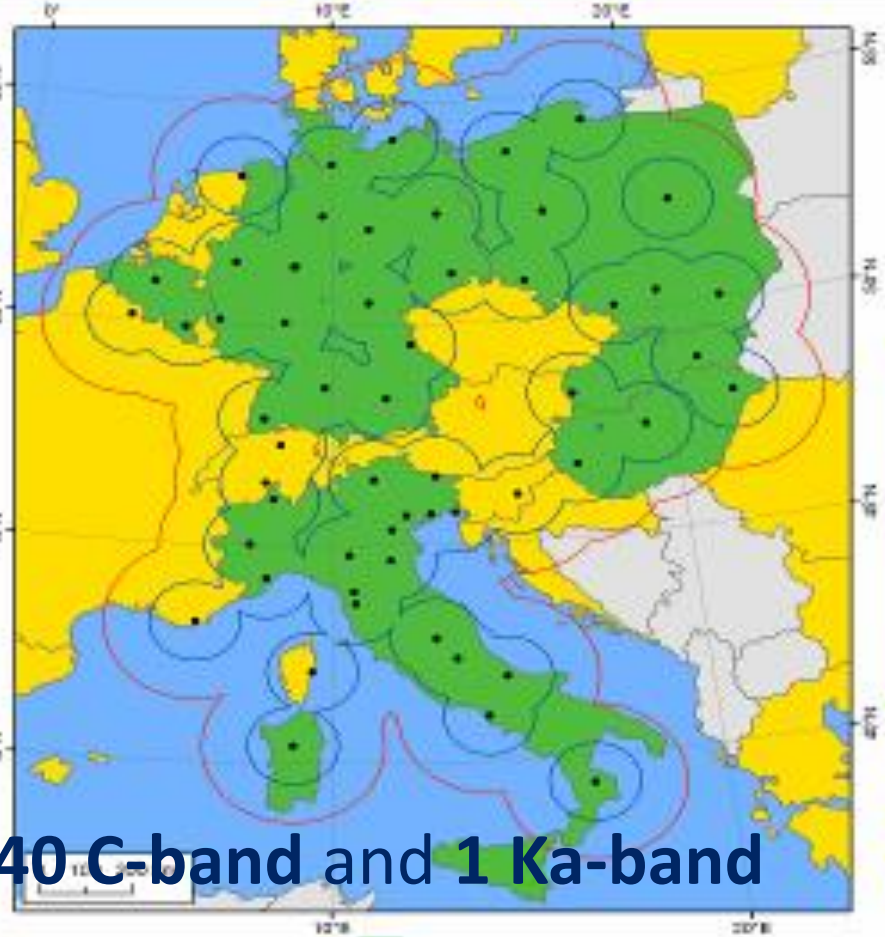

Data Sources	Raingauges
Instrument characteristics	Telemetric and mechanic
Time domain (near real time/ case studies)	Near real time, case studies
Time resolution (15 min, 30 min)	10 – 30 min (telemetric), 3 – 24 h (mechanic)
Spatial distribution (whole national territory/ limited area)	Whole national territory
Number of station	~390 mechanic (RMI) + 12 telemetric (RMI) + 4160 telemetric (SETHY)
Operational/ for research only	Operational (RMI) + research (other networks)
Data quality check	Telemetric: automatically checked / mechanic: autom. + manually checked

# Quality Monitoring Programme

## The Radar Network

Data Sources	Radars
Instrument characteristics	Beam width $\sim 1^\circ$ , max range $\sim 150$ Km, 250m, C-band, single polarization, Doppler polarimetric
Time domain	Near real time/ case studies
Time resolution	5 min, 15 min, 30 min, 1h, 24h
Spatial distribution	Whole national territory
Number of station	40 C-band +1 Ka-band

**40 C-band and 1 Ka-band**

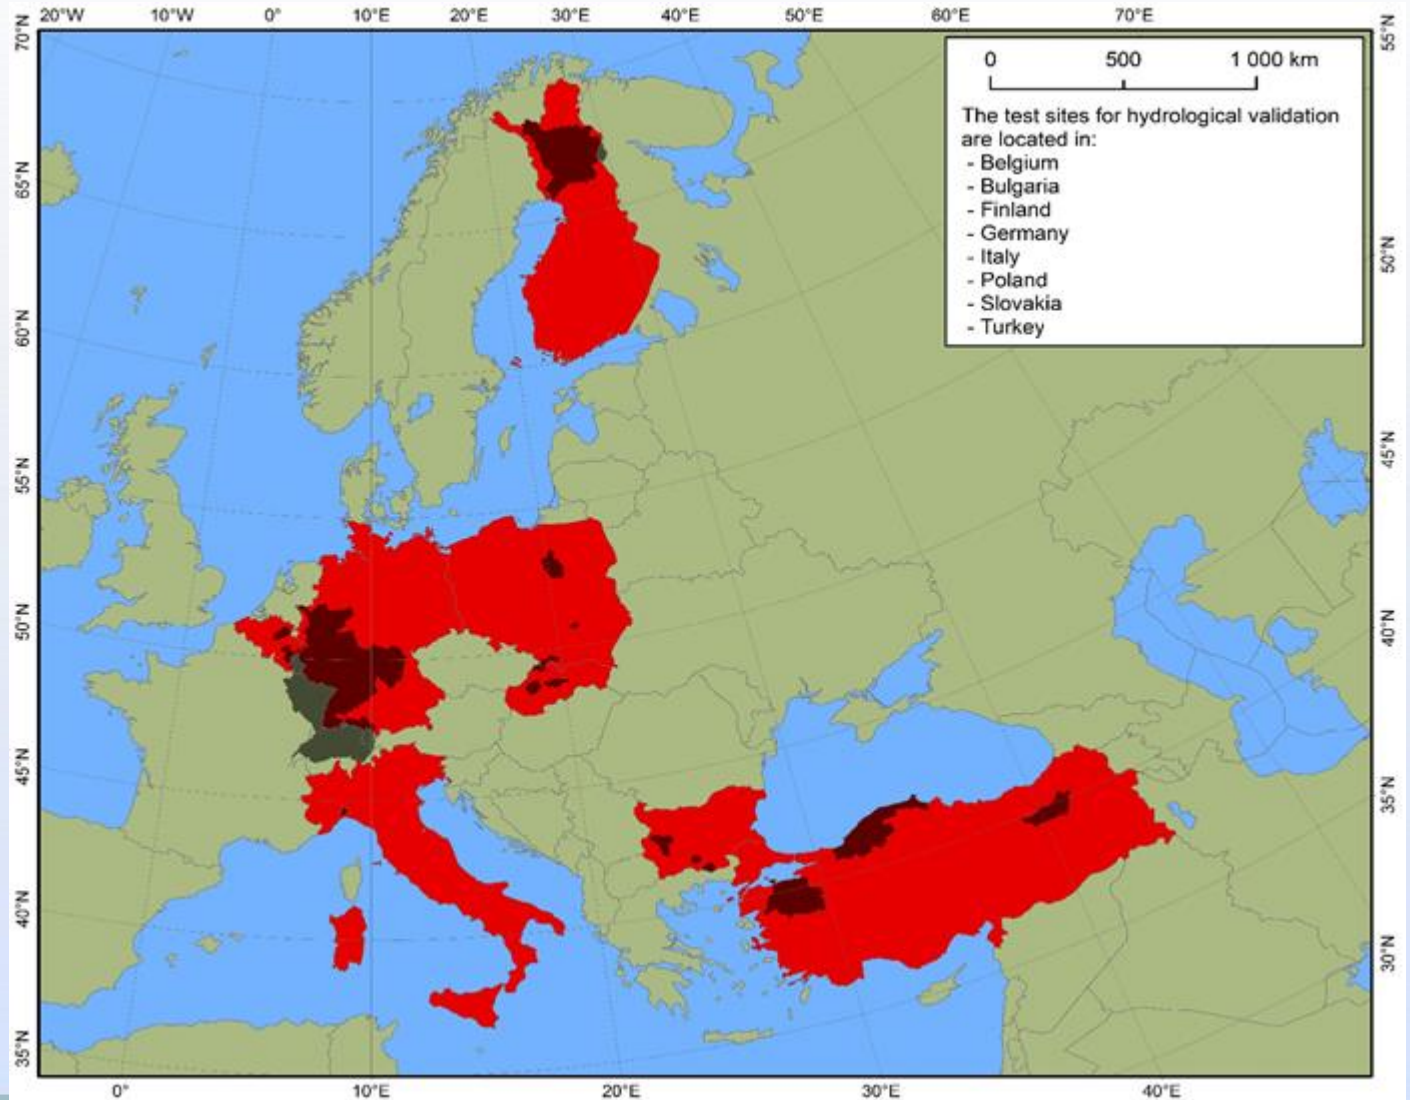

- Weather radar units.
- H-SAF precipitation products validation countries.
- Other EUMETSAT member and cooperating countries.
- Other countries.
- Horizontal beams extent of 100 km
- Horizontal beams extent of 300 km

# Hydrovalidation Programme

## The Test Sites

## Central Services - Archiving

H-SAF Products are **centrally collected** by NRT ingestion from peripherals to Central Site at CNMCA.

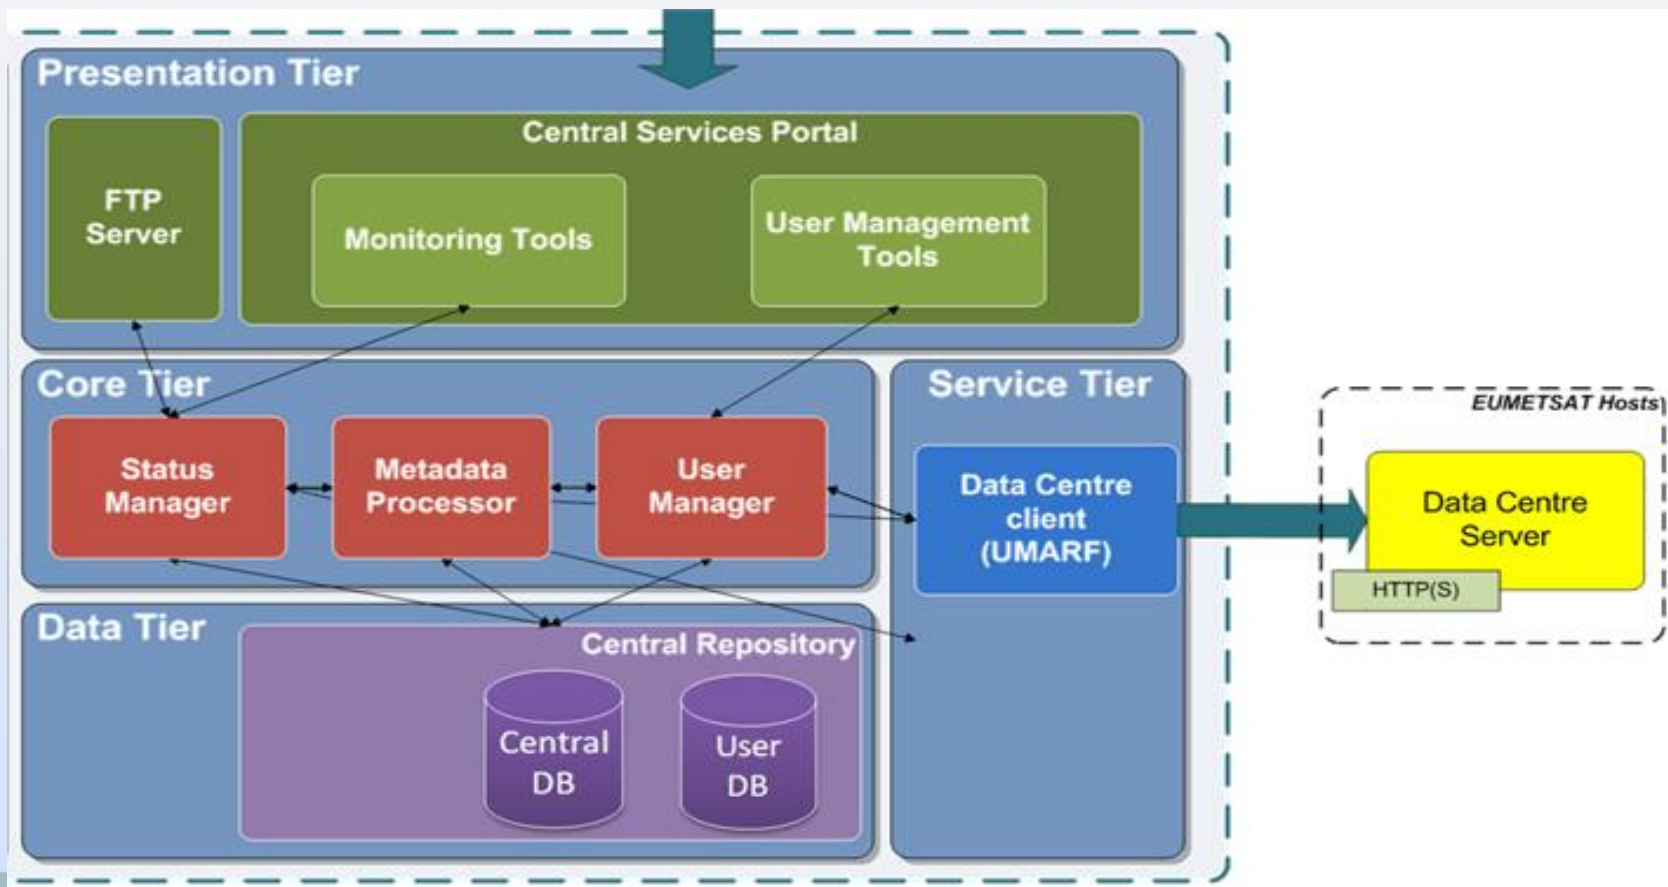

**NRT availability requirement guaranteed to end users.**

Products are maintained in two different storage areas:

- **On-line archive:** Latest 60 days of production constantly available (24 / 7). Immediate access to selected items, for registered users.
- **Off-line archive :** Entire production since the beginning of H-SAF operations. Items available through Order Management system, made available on demand in a FTP area for a limited temporal window

# Central Services - Dissemination

Dissemination of products foresees use of both **EUMETSAT Data Delivery Service (EUMETCast)** and **ftp dedicated server** by H-SAF Central Facilities

# Central Services – Operations

## Monitoring Tools

Automatic tools at Central Site continuously monitors:  
**production, ingestion** and **dissemination**

Main functionalities of monitoring:

- Central Ingestion of products coming from distributed production centers
- Product chains status
- EUMETCast broadcasting status
- User registration
- Product performances

Alerting messages in case of anomalies.

## SNOW

# User Services – Map Tool

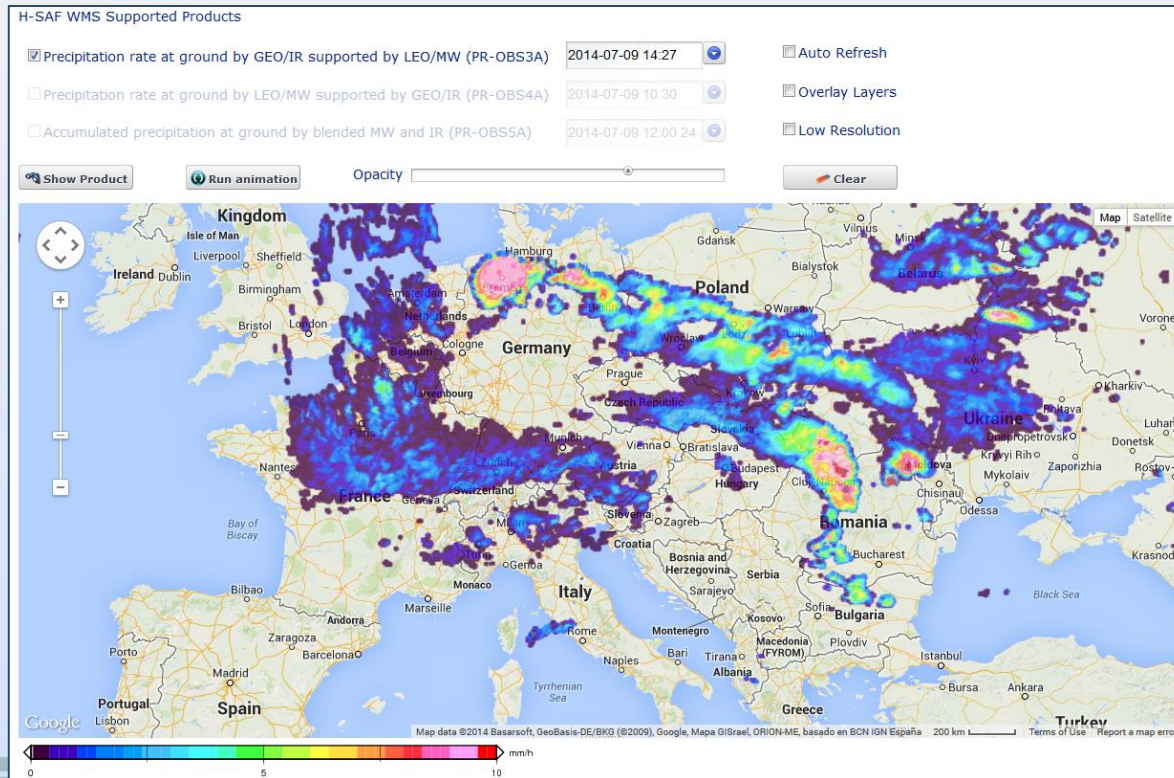

The **Map Tool** is a web application that provides an easy to use tool - you only need a web browser and a good internet connection - to display a set of precipitation products (H03, H04 and H05) on a **georeferenced map**.

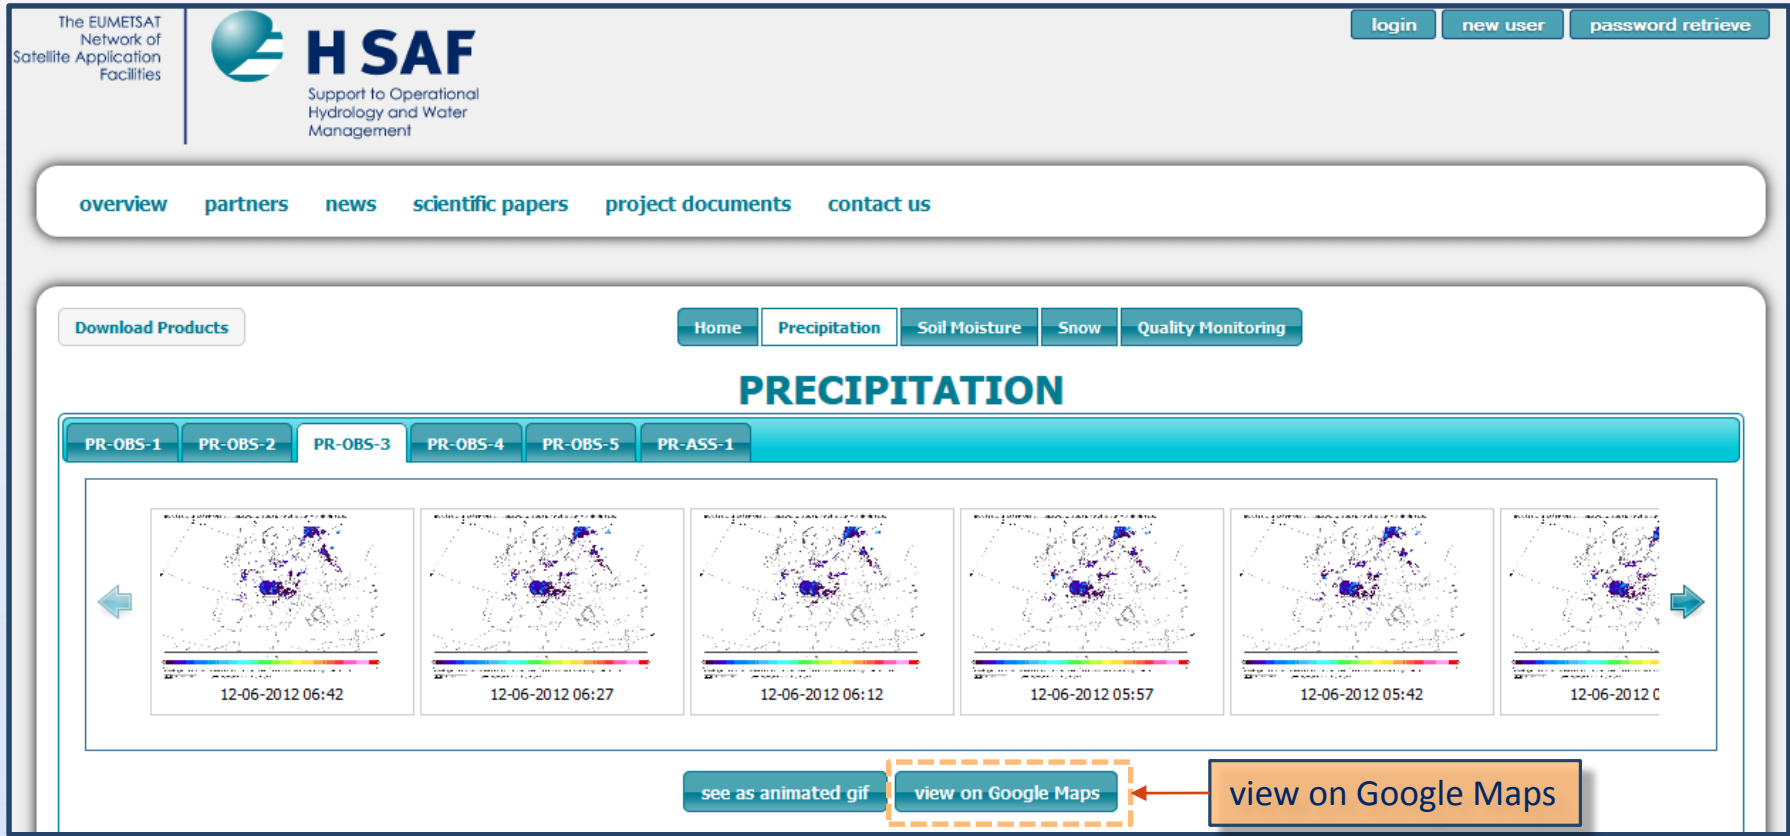

# User Services – Map Tool

The **MAP Tool** is also an operational tool that allows users to monitor the current status of rainfall on the ground (H03, H04) or the status of the accumulated precipitation (H05), updating automatically the map with the last H-SAF product available.

# User Services – Map Tool

The **MAP Tool** can be reached from the official website of HSAF [hsaf.meteoam.it](http://hsaf.meteoam.it) after registration.

The screenshot displays the HSAF website interface. At the top left, it identifies 'The EUMETSAT Network of Satellite Application Facilities'. The main header includes the HSAF logo and navigation links: 'login', 'new user', and 'password retrieve'. Below this is a secondary navigation bar with links for 'overview', 'partners', 'news', 'scientific papers', 'project documents', and 'contact us'. The main content area features a 'Download Products' button and a category menu with 'Home', 'Precipitation', 'Soil Moisture', 'Snow', and 'Quality Monitoring'. The 'PRECIPITATION' section is active, showing a row of product tabs: 'PR-OBS-1', 'PR-OBS-2', 'PR-OBS-3', 'PR-OBS-4', 'PR-OBS-5', and 'PR-ASS-1'. Below these tabs is a sequence of six precipitation maps over Europe, each with a timestamp: '12-06-2012 06:42', '12-06-2012 06:27', '12-06-2012 06:12', '12-06-2012 05:57', '12-06-2012 05:42', and '12-06-2012 05:27'. At the bottom of the map sequence are three buttons: 'see as animated gif', 'view on Google Maps' (highlighted with a dashed orange box), and another 'view on Google Maps' button with an arrow pointing to the first one.

# MAPS TOOL (Beta v0.9.3)

## H-SAF WMS Supported Products

- Precipitation rate at ground by GEO/IR supported by LEO/MW (PR-OBS3A) 2014-10-27 14:27  Auto Refresh
- Precipitation rate at ground by LEO/MW supported by GEO/IR (PR-OBS4A) 2014-10-28 04:30  Overlay Layers
- Accumulated precipitation at ground by blended MW and IR (PR-OBSSA) 27 12:00 24 cumulated  Low Resolution
